1. Introduction

DOC AXIS (Document Asset and Information Search System) is an enterprise-grade document retrieval platform deployed within the ONGC Assam Asset IT infrastructure. The system enables authorized personnel to search, retrieve, and manage enterprise documents through a centralized, secure, and metadata-driven interface.

DOC AXIS is designed to support operational efficiency by providing structured access to large volumes of indexed organizational documents while maintaining strict access controls and audit compliance.

1.1 Purpose

This manual provides comprehensive guidance for end users, administrators, and system managers on the installation, configuration, and operation of DOC AXIS. It covers all functional modules and is intended to serve as the primary reference document for training and day-to-day system usage.

1.2 Scope

This document applies to all authorized users of DOC AXIS within the ONGC Assam Asset. It covers the following functional areas:

- User registration and authentication
- Dashboard and navigation
- Document search and metadata filtering
- Dataset management and access control
- Administrative functions
- Troubleshooting and support

1.3 Intended Audience

Audience	Description
End Users	ONGC personnel authorized to search and retrieve documents
System Administrators	Personnel responsible for user management, dataset configuration, and system oversight
IT Support Staff	Personnel responsible for system maintenance and troubleshooting

2. System Overview

DOC AXIS is a web-based enterprise document retrieval system. It provides a unified search interface over a repository of indexed organizational documents, enforcing access controls at the dataset and metadata levels. The system is accessible via the ONGC Enterprise Portal using CPF-based authentication.

2.1 Key Features

- Enterprise document search with multi-keyword support
- Metadata-driven search and filtering across multiple attributes
- Dataset-specific access control with role-based permissions
- User activity monitoring and audit logging
- Administrative management console
- CPF-based user authentication
- SQL query transparency for advanced searches

2.2 System Architecture Summary

Component	Description
User Interface	Web-based portal accessible via standard enterprise browsers
Authentication Layer	CPF-number and password-based login with administrator approval
Search Engine	Metadata-indexed document retrieval engine supporting keyword and filter-based queries
Access Control Module	Dataset-level and metadata-level permission enforcement
Admin Console	User management, dataset configuration, and activity monitoring

3. User Roles and Permissions

DOC AXIS enforces a role-based access control model. Access to documents, datasets, and administrative features is governed by the role assigned to each user account by the system administrator.

3.1 Role Definitions

Role	Access Level	Capabilities
Standard User	Dataset-restricted	Search and retrieve documents within authorized datasets; view permitted metadata fields
System Administrator	Full system access	Manage users, approve registrations, configure datasets, assign permissions, view activity logs

NOTE: Two users with different permission profiles searching for the same keyword may receive different search results. This behavior is by design and ensures compliance with organizational access restrictions.

3.2 Permission Inheritance

Permissions are additive and are granted at two levels:

- Dataset Permissions: Determine which document collections a user may search.
- Metadata Visibility Permissions: Determine which metadata fields are visible in search results for a given user.

IMPORTANT: Access to additional datasets or metadata fields must be formally requested through the system administrator. Users cannot self-grant permissions.

4. Getting Started

This section describes the prerequisites and initial steps required to access DOC AXIS for the first time.

4.1 System Requirements

Requirement	Specification
Network	Connected to the ONGC intranet or authorized network
Web Browser	Any current enterprise-supported browser (Chrome, Firefox, Edge)
Credentials	A valid CPF Number and registered DOC AXIS password
Account Status	Account must be approved by a system administrator before first login

4.2 First-Time Access Workflow

1. Navigate to the ONGC Enterprise Portal.
2. Register for a DOC AXIS account (refer to Section 5).
3. Await administrator approval of your registration.
4. Upon approval notification, log in using your CPF Number and password.
5. Review the Dashboard and verify your accessible datasets.

5. Login and Authentication

5.1 Logging In

Users access DOC AXIS using their CPF Number and associated password through the ONGC Enterprise Portal.

Purpose

To authenticate an authorized user and grant access to the DOC AXIS platform.

Procedure

6. Open a supported web browser and navigate to the ONGC Enterprise Portal.
7. On the login screen, enter your CPF Number in the CPF NUMBER field.
8. Enter your Password in the PASSWORD field.
9. Click the LOG IN button.
10. Upon successful authentication, the system redirects you to the Dashboard page.

Figure 5.1: DOC AXIS Login Screen – CPF-based authentication

WARNING: Do not share your CPF Number or password with other personnel. Each user must maintain unique credentials. Unauthorized credential sharing may result in account suspension.

Expected Outcome

The Dashboard page is displayed, confirming successful authentication.

5.2 User Registration

New users must register before accessing DOC AXIS. Registration requests are subject to administrator approval before the account becomes active.

Purpose

To create a new DOC AXIS user account and submit it for administrator approval.

Procedure

11. On the Login screen, click the Register link.
12. The Create Account form is displayed.
13. Enter the following information:
 - Full Name: The user's complete legal name as recorded in ONGC HR systems.

- Department: The user's current department.
 - CPF Number: The user's unique ONGC CPF number.
 - Password: A strong password for the account.
 - Confirm Password: Re-enter the password to confirm.
14. Click CREATE ACCOUNT.
 15. A confirmation message is displayed. The account remains in Pending status until approved by an administrator.

Figure 5.2: *DOC AXIS Create Account Registration Form*

NOTE: New registrations remain in Pending status until reviewed and approved by a system administrator. You will be notified when your account has been activated.

Expected Outcome

A registration request is submitted and appears in the administrator's approval queue. The user may not log in until the account is approved.

6. Dashboard Overview

The Dashboard is the primary landing page following successful authentication. It provides a real-time summary of system activity and document indexing status.

6.1 Purpose

To provide authorized users with an at-a-glance view of system metrics and serve as the central navigation hub for all DOC AXIS modules.

6.2 Dashboard Components

Component	Description
Total Files	The total number of documents currently indexed in the system
Indexed Successfully	The number of documents indexed without errors
Pending Indexing	The number of documents queued for indexing
User Management Summary	A summary table showing counts of Approved, Pending, and Rejected user accounts (visible to administrators)
Navigation Menu	Links to Home, About Us, Document Search, Admin Panel, and Log Out

Figure 6.1: DOC AXIS Dashboard – System summary and navigation

NOTE: The User Management Summary section is visible to administrators only. Standard users will see a simplified dashboard view.

7. Document Search

The Document Search module is the core operational component of DOC AXIS. It enables authorized users to locate documents within accessible datasets using keyword queries and metadata filters.

7.1 Accessing Document Search

16. Click Document Search in the top navigation bar.
17. The Enterprise Metadata Search Engine interface is displayed.

7.2 Basic Search

Purpose

To locate documents by entering one or more keywords against all authorized document metadata.

Description

The basic search accepts one or more keywords entered into the search input field. The system searches against all accessible indexed metadata fields and returns matching results.

Procedure

18. Navigate to the Document Search module.
19. Enter one or more keywords in the search input field.
20. Select the search mode:
 - UNION: Returns all documents matching any of the entered keywords.
 - INTERSECTION: Returns only documents matching all of the entered keywords.
21. Click Search.
22. Review the results displayed in the results table.

Example Search Terms

Example Keyword	Typical Use Case
maintenance	Retrieve maintenance logs, reports, and inspection documents
inspection	Locate equipment inspection records
pipeline	Find pipeline-related project documents
procurement	Search for procurement orders and vendor documents
shutdown	Retrieve shutdown analysis and reports

Expected Outcome

A results table is displayed showing all documents matching the search criteria within the user's authorized datasets. The result count is displayed above the table.

Figure 7.1: *DOC AXIS Document Search – Enterprise Metadata Search Engine interface with results*

TIP: Use INTERSECTION mode when searching with multiple keywords to narrow results to documents that contain all specified terms simultaneously.

8. Metadata Filtering

8.1 Overview

Metadata filters allow users to refine search results by applying attribute-based criteria. Filters are displayed in the Metadata Filters panel on the left side of the Document Search interface.

NOTE: The available metadata filter fields displayed to a user depend on that user's assigned metadata visibility permissions. Not all fields listed below may be visible to all users.

8.2 Available Metadata Filter Fields

Metadata Field	Description
Asset ID	Identifier of the ONGC asset associated with the document
Department	Organizational department that owns or produced the document
Location	Physical or operational location associated with the document
Revision	Document revision identifier (e.g., R4, R8, R13)
Status	Current document status (e.g., Approved, In Progress, Pending, Completed)
Project Name	Name of the associated project
Year	Year of document creation or modification
Document Type	Category of document (e.g., Shutdown Reports, Safety Logs, Audit Documents)
Priority	Document priority classification (Critical, High, Medium, Low)
Modified Date	Date on which the document was last modified

8.3 Applying Metadata Filters

Procedure

23. In the Metadata Filters panel, locate the desired filter field.
24. Enter a value in the Filter value field beneath the field name.
25. Repeat for additional filters as required.
26. Click Apply Filters.

27. The results table refreshes to display only documents matching all applied filter criteria.

Expected Outcome

The results table displays a filtered subset of documents corresponding to the specified metadata values.

Figure 8.1: *DOC AXIS Metadata Filters panel with applied filter criteria*

TIP: Multiple metadata filters may be applied simultaneously to achieve highly precise search results. Combining Department, Document Type, and Year filters is a common approach for locating specific operational documents.

9. Dataset Filtering

9.1 Overview

Dataset Filtering enables users to restrict their search to a specific subset of document collections (datasets). The Dataset Filter section is located within the Metadata Filters panel.

9.2 Benefits of Dataset Filtering

- Faster result discovery by eliminating irrelevant datasets from the search scope
- Reduced result volume for more manageable output
- Improved search accuracy within a specific operational domain

9.3 Applying a Dataset Filter

Procedure

28. In the Metadata Filters panel, scroll to the Dataset Filter section.
29. Select one or more datasets from the available list.
30. Click Apply Filters.
31. The search results are restricted to documents within the selected datasets.

IMPORTANT: Only datasets to which the user has been granted access will appear in the Dataset Filter list. Contact the system administrator to request access to additional datasets.

10. Column Filters

10.1 Overview

Column Filters allow users to selectively display or hide specific metadata columns in the search results table. This feature aids readability when working with large result sets.

10.2 Using Column Filters

Procedure

32. In the Document Search interface, click Show Column Filters above the results table.
33. A column visibility control panel is displayed.
34. Select or deselect the checkboxes corresponding to the columns you wish to display or hide.
35. The results table updates immediately to reflect the selected column configuration.

Expected Outcome

The search results table displays only the columns selected by the user, providing a focused and uncluttered view of the relevant metadata.

TIP: Hiding irrelevant columns is particularly useful when exporting or printing search results for reporting purposes.

11. SQL Query View

11.1 Overview

DOC AXIS provides transparency into the underlying search logic by offering an SQL Query View. This feature displays the SQL query generated by the system based on the user's current keyword and filter inputs.

11.2 Accessing the SQL Query View

Procedure

36. In the Document Search interface, click Show SQL Query.
37. The SQL query panel expands to display the query currently being executed against the document index.

Expected Outcome

The generated SQL query is displayed in read-only format, reflecting the user's active search keyword and all applied filters.

NOTE: The SQL Query View is provided for transparency and diagnostic purposes only. Users cannot edit or directly execute SQL queries through this interface.

12. Search Results

12.1 Overview

The search results table displays all documents matching the current keyword query and applied filter criteria that fall within the user's authorized datasets.

12.2 Results Table Columns

Column	Description
View	Action button to open the document detail view
File Name	The indexed file name of the document, with the matching keyword highlighted
ID Date	Internal document identifier date
Department	Department associated with the document
Document Type	Classification of the document
Location	Operational or physical location associated with the document
Modified Date	Date of the last recorded modification
Priority	Priority classification of the document
Project Name	Name of the associated project
Revision	Current revision identifier
Status	Current lifecycle status of the document
Year	Year of document creation

12.3 Pagination

Where results exceed a single page, navigation controls are displayed below the results table: First, Previous, Page [n] of [N], Next, Last. Use these controls to navigate between result pages.

12.4 Result Count

The total number of results matching the current query is displayed above the results table in the format: Results found = [n].

NOTE: Search results are filtered according to the current user's dataset and metadata permissions. The displayed result count reflects only documents accessible to that user.

13. Document Preview

13.1 Overview

Authorized users may open and review document metadata and associated details directly from the search results table using the View action.

13.2 Viewing a Document

Purpose

To access the full metadata and detail record of a specific document returned in search results.

Procedure

38. In the search results table, locate the target document.
39. Click the View button in the View column for that document.
40. The document detail panel or page is displayed.

13.3 Document Detail Information

Detail Field	Description
File Metadata	Full metadata record for the document including all indexed attributes
Associated Project Information	Project linkage details where applicable
Asset Information	ONGC asset identifier and associated asset data
Department Details	Owning department information
Additional Indexed Attributes	Any supplementary metadata available for the document based on the user's permissions

WARNING: Access to document detail views is restricted to authorized users only. Attempting to access a document outside your permitted datasets will result in an access denied response.

14. User Management

The User Management module is accessible only to system administrators via the Admin Panel. It provides tools to manage user accounts, approve or reject registrations, and configure user permissions.

14.1 Accessing User Management

41. Log in with an administrator account.
42. Click Admin Panel in the top navigation bar.
43. Select User Management from the admin console.

14.2 Approving User Registrations

Purpose

To review and approve pending user registration requests.

Procedure

44. In User Management, navigate to the Pending Registrations list.
45. Review the applicant's details (Full Name, Department, CPF Number).
46. Click Approve to activate the account, or Reject to decline the registration.
47. The user's account status is updated accordingly and the user is notified.

14.3 User Account Status Definitions

Status	Description
Approved	Account is active and the user may log in and use the system
Pending	Registration has been submitted but not yet reviewed by an administrator
Rejected	Registration has been declined by an administrator

14.4 Managing User Permissions

Administrators may assign or modify the following for each user account:

- Dataset access permissions: Specifies which document datasets the user may search.
- Metadata visibility permissions: Controls which metadata fields are visible in search results.
- Access policies: Broader role-based policies applied to the account.

IMPORTANT: Changes to user permissions take effect upon the user's next login session. Active sessions may not reflect permission changes until re-authentication.

15. Activity Logs

15.1 Overview

DOC AXIS maintains an audit log of user activities within the system. Activity logs are accessible to system administrators and support compliance and security monitoring requirements.

15.2 Logged Events

- User login and logout events
- Document search queries performed
- Filters applied during search sessions
- Document detail views accessed
- User registration submissions
- Administrator approval and rejection actions

15.3 Accessing Activity Logs

48. Log in with an administrator account.
49. Navigate to Admin Panel.
50. Select Activity Logs from the admin console menu.
51. Apply date range or user filters as required to narrow the log view.

NOTE: Activity log data is retained in accordance with ONGC data governance policies. Contact the IT Division for log retention period details.

16. Dataset Management

16.1 Overview

Datasets are collections of indexed documents organized by operational domain, project, location, or department. Dataset management is an administrator-only function performed through the Admin Panel.

16.2 Dataset Configuration Tasks

Task	Description
Create Dataset	Define a new document collection with a name, description, and associated indexing parameters
Assign Users to Dataset	Grant one or more users access to a specific dataset
Revoke Dataset Access	Remove a user's access to a specific dataset
View Dataset Statistics	Review the number of indexed documents and access history for a dataset

WARNING: Deleting or modifying a dataset may affect all users with access to that dataset. Perform dataset configuration changes during scheduled maintenance windows where possible.

17. Troubleshooting

This section describes common issues encountered during DOC AXIS usage and their recommended resolutions.

Symptom	Probable Cause	Recommended Action
Cannot log in with valid CPF and password	Account pending administrator approval, or password incorrect	Verify password; contact administrator to confirm account status
No search results returned	No documents in accessible datasets match the keyword, or search term is too specific	Broaden the keyword; try synonyms; remove metadata filters; verify dataset access
Fewer results than expected	Dataset or metadata permission restrictions	Contact administrator to verify dataset access assignments
Metadata filter fields not visible	Insufficient metadata visibility permissions	Request additional metadata visibility permissions from the system administrator
View button does not open a document	Access denied or document unavailable	Confirm document access permissions with the administrator
Registration not approved after extended wait	Administrator review pending	Contact the system administrator directly to follow up on the registration request
Page loads slowly or search times out	Network connectivity issue or high server load	Check intranet connectivity; retry during off-peak hours; report persistent issues to IT Support

18. Frequently Asked Questions

Q: Why do different users receive different search results for the same keyword?

Search results in DOC AXIS are filtered according to each user's assigned dataset and metadata permissions. Two users with different permission profiles will receive results limited to their individually accessible document collections. This behavior is intentional and enforces organizational access restrictions.

Q: Can I access all datasets in the system?

No. Dataset access is individually assigned by the system administrator. Users may only search within datasets for which they have been explicitly authorized.

Q: How do I request access to additional datasets or metadata fields?

Contact your designated system administrator and submit a formal access request, specifying the dataset or metadata field required and the business justification.

Q: Can I search using multiple keywords simultaneously?

Yes. The DOC AXIS search engine supports multi-keyword queries. Use UNION mode to retrieve results matching any keyword, or INTERSECTION mode to retrieve results matching all keywords simultaneously.

Q: Who approves new account registrations?

All new account registrations are reviewed and approved by designated system administrators. The administrator will activate the account or reject the registration based on organizational authorization.

Q: How do I change my password?

Contact the system administrator or IT Support for assistance with password changes. Self-service password reset functionality, if available, will be communicated by the IT Division.

Q: What should I do if I notice a document indexed incorrectly?

Report the discrepancy to the system administrator, providing the file name, dataset, and a description of the incorrect metadata. The administrator will arrange for re-indexing or correction.

19. Best Practices

19.1 Search Efficiency

- Begin with a broad single keyword before progressively applying metadata filters to narrow results.
- Use INTERSECTION mode when searching with two or more keywords to retrieve highly targeted results.
- Apply Dataset Filters when you know the operational domain of the target document to reduce result volume and improve speed.
- Use the Year filter in combination with Document Type to quickly locate annual reports, audit documents, or inspection records.

19.2 Account Security

- Never share CPF credentials or DOC AXIS passwords with colleagues or contractors.
- Log out of the system after each session, particularly when using shared workstations.
- Report any suspected unauthorized access or unusual system behavior to the IT Division immediately.

19.3 Data Access Compliance

- Access only documents and datasets for which you are authorized.
- Do not attempt to circumvent access controls or search for documents outside your operational responsibility.
- All user activity is logged and auditable for compliance purposes.

19.4 Administrative Best Practices

- Review and action pending user registrations promptly to avoid operational delays for new users.
- Conduct periodic reviews of user permissions to ensure access remains aligned with current roles and responsibilities.
- Schedule dataset configuration changes during low-usage periods to minimize impact on active users.

20. Contact and Support

For technical assistance, account management, or access requests related to DOC AXIS, contact the IT Division of the ONGC Assam Asset.

Contact Type	Details
System Administrator	Contact your designated DOC AXIS system administrator for access requests, account approvals, and permission changes
IT Support Helpdesk	ONGC Assam Asset – IT Division (contact details as per internal directory)
Issue Reporting	Report system errors or data discrepancies to the IT Division via the internal helpdesk ticketing system
Training Requests	For DOC AXIS user training, contact the IT Division to schedule a session

NOTE: For urgent system availability issues outside business hours, refer to the ONGC Assam Asset IT emergency contact procedures published in the IT Division notice board.
